

Installation Instructions

Committed to the industry movement toward virtualization, we distribute our solutions as Virtual Appliances, eliminating installation, configuration, and maintenance costs associated with traditional deployment methods.

To take full advantage of FreezerPro, ezColony, Sciency or LIMS 247, and be able to access the software from any PC on your network, a free virtualization software from VMware or Microsoft should be installed on your computer. Virtualization software enables companies to partition a physical server into multiple virtual machines. This product requires to run on either Windows, Mac OS X or Linux operating systems.

If you are just starting with virtualization we recommend using VMware Player. VMware Player is also recommended when installing on Windows Vista, Windows 7 or using applications without the network connection.

For System/Network Administrators performing installation and those customers planing to run multiple Virtual Machines in parallel we recommend VMware Server or Microsoft Hyper-V.

Both VMware Player and VMware Server are free products from VMware.

Please visit our web site at <http://www.ruro.com/install> for detailed, step-by-step installation instructions and system requirements.

Once you have virtual machine (VM) up and running, open your Internet browser and type <http://192.168.1.30> (or any other IP address that is shown in VM console). Press Enter. The login page appears. At the login page, enter login name: **admin** and password: **admin** to access FreezerPro, ezColony, Sciency ELN or LIMS 247. The login and password can be changed at any time.

By default VM is configured to use DHCP to obtain network IP address. Please consider changing this to a static IP address or configuring DHCP server in your organization to always provide the same IP address to the virtual machine.

To activate the full version of FreezerPro, ezColony or LIMS 247 please select **Activate Over The Internet** at your VM console and enter the product number provided with the installation CD-ROM.
