

Discover the Future with Sciency ELN Electronic Laboratory Notebook

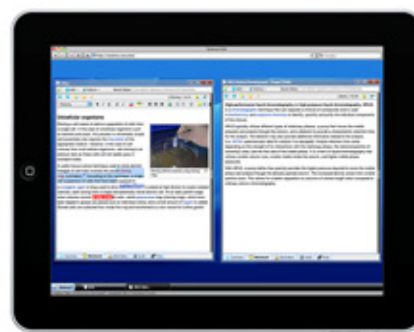

Revolutionizing how researchers
organize, capture, share and preserve
research data and notes

Sciency® ELN empowers labs to establish standards for documenting research and makes it easier for researchers to organize and retain that information.

Previously, situations like changes in research personnel could lead to potential losses of intellectual property or reveal meaningless instrument data and poorly maintained lab notes, scenarios that Sciency® can help an organization avoid while improving productivity at the same time.

- Single and secure research data repository
- Lab projects organization and management
- Live search of notebook entries
- 100% Web based - install once, access from anywhere

Designed to revolutionize how researchers organize, capture, share and preserve data and lab notes, Sciency ELN delivers a robust scalable and integrated framework for electronically managing and sharing research data that protects valuable intellectual property, streamlines laboratory processes and supports 21 CFR Part 11 compliance.

New features in Sciency ELN 2.5 include:

- Support for drag and drop file uploads that simplifies data entry from Windows or Mac PCs into Sciency ELN
- Faster integration of images and files into notes
- Available Project Templates enable research managers to develop a holistic structure for project data and note collection
- Enhanced integration with ezColony and FreezerPro

Sciency ELN is uniquely designed to be used out-of-the-box across multiple scientific disciplines including sequencing, genomics, proteomics, analytical and synthetic chemistry, biology and other research environments. From discovery to manufacturing!

The key new concept in Sciency is your studies: you can organize research data into multiple projects and attach notes, images, web links and files. Managing your projects, data, and notes has never been more complete and simplified.

Key benefits and features:

- Comprehensive management and organization of experimental data.
- Easy data capture through the beautiful web interface.
- Simplifies and accelerates data searching and retrieval.
- Reduces the burden of paper notebooks/paper trails.
- Easy document management, browsing and searching!
- Eliminates redundant data entry.
- Enhance workflow productivity.
- Consolidate experimental data.
- Improve collaboration through centralized research environment.
- Minimize data errors.
- Simplify regulatory compliance.
- Protect intellectual property.
- Search within and across projects.
- Cross-team collaboration and data sharing.
- Packaged as a Virtual Appliance for quick deployment into enterprise IT infrastructure.
- World-class secure platform.

Feature List

Features	Science Standard	Science Enterprise
Compatible with all platforms including PC, Mac, Linux, web tablets	✓	✓
Multi-window, multitasking desktop environment right in your web browser	✓	✓
Ability to collaborate with colleagues across the lab and across the world	✓	✓
Interlinked notebooks with notes, external pages, images, spreadsheets, and documents	✓	✓
Unlimited number of notebooks and notebook entries	✓	✓
Notes and projects templates to organize data entry	✓	✓
Design studies, conduct analysis and generate visualizations	✓	✓
Versioning for notebook entries	✓	✓
Project prioritizing, customizable project types and project workflows	✓	✓
Permission-based access to projects and notebooks	✓	✓
Single and double electronic signatures	✓	✓
Compliance with 21 CFR Part 11, GLP, ISO and other key regulatory requirements	✓	✓
Integration with FreezerPro and ezColony software		✓
Data encryption using 1024-bit technology and Secure Sockets Layer (SSL)		✓
User authentication via Active Directory Domain Services (LDAP)		✓
Support for external databases (PostgreSQL, MySQL, Oracle, Microsoft SQL Server)		✓
Hyper-V support on Microsoft Windows Server		✓
